

## Visual Design and User Experience

### CA 2

#### Group Project

##### Instructions:

- Visual Studio Code will be used in this course and so you should use this to complete the assignments.
- You will also have to complete a User Requirements Document (See Moodle). In this document you will complete any User requirements and detail what each group member is responsible for and what was done by each member.
- You should follow any naming conventions that are set out in Lectures, Tutorials and Labs.
- You should zip all files and folders and upload it to Moodle using the following naming convention Group<NUMBER>.zip
- **Due Date : Friday 18<sup>th</sup> December at 17:00**

##### Brief:

You are going to make a website which will represent this module, Visual Design and User Experience. The site should focus on what your group deems as the most important concepts of the module.

##### Requirements:

###### Basic Requirements:

- There must be at least 5 pages relating to the module.
- There should be one page which will contain a bio for each member of the team.
- There should be functioning navigation between all the pages.
- You should have 1 style sheet with all css rules commented as to what they do. If there is more than one style sheet, reasons for this should be clearly indicated.
- You should ensure that your site is fully responsive, this means using designs such as flex and media queries.
- A full user Requirements document and questionnaire.

###### Additional requirements:

- You should attempt to style the site using practices outlined in lectures (colours, positioning, flex, navbars etc etc.)
- For anyone with experience with JavaScript, keep its use to a minimum. You do not need JavaScript in the site and marks will not be awarded for it.
- No code should be taken from websites external to this project. This means you cannot use code found on W3 School, StackOverflow etc. If your group is found to be using code found on these sites, there will be implications for the entire group. Therefore, it is the groups responsibility to ensure this does not happen.
- You will be required to make a 5-minute final presentation of the website. This will be recorded and details on this will be shared closer to the end of the module.
